

# Lighting Lookout

Lighting is used in many different ways.

Your challenge is to use your eyes to lookout for different types of lighting around you.

Try to find examples of lights that are controlled using a remote control or a control switch. Remember, do not touch the lighting because of the dangers of electricity that we have learnt about in class.

Clear labelled sketch of the lighting.	How does the design reflect the intended user and its purpose?	Which materials have been used?

## Added Challenge

Investigate and write about how street lamps work.
